# Client Case

## Client Case: Regionalverband Saarbrücken (RVS)

Regionalverband Saarbrücken set out to modernise and centralise the student ID card process for more than 32,000 students across the region. Together with Zebra, Zebra reseller KFK Bürotechnik, and ScreenCheck, the organisation implemented a unified solution that delivers efficient card printing, encoding, issuance, consistent quality, and streamlined administration.

### Regionalverband Saarbrücken - The Client

Responsible for 71 schools in the region, RVS required a modern, centralised approach to managing and issuing student ID cards efficiently and securely.

### KFK Bürotechnik - Zebra Reseller

KFK Bürotechnik provides local expertise, supplies the Zebra hardware, and ensures that each school has the right printing equipment and support for daily operations.

### Zebra

Zebra delivered the reliable card printing technology used throughout the school network, enabling consistent, high-quality card production across all locations.

### ScreenCheck

ScreenCheck provided and implemented the CardsOnline card management platform, integrating identity management, data processing, and local printing workflows into one centralised system.

## Smart, scalable ID card management for 32,000 students across 71 schools

### The Challenge

Regionalverband Saarbrücken needed a unified and reliable way to manage ID card issuance for 32,000 students across 71 schools at around 50 locations. With each location previously handling processes differently, the organisation faced inconsistencies in data accuracy, card quality, and administrative workload.

RVS required a centralised system that still allowed local card production, local inline encoding, ensured consistent student identification, and integrated smoothly with their existing Zebra card printer fleet.

### The Solution

In collaboration with the Zebra reseller, ScreenCheck delivered a scalable solution based on **CardsOnline**, enabling RVS to centrally manage student data while allowing each school to print & encode cards locally. The system provided a secure, cloud-based environment for automatic import of student data from the central student information system, designing standardised card layouts, and controlling the full card lifecycle. With **48 Zebra ZC300 card printers** integrated via ScreenCheck's workflow, every school can produce high-quality, student ID cards on demand.

### The Result

RVS now benefits from a streamlined, transparent and efficient ID card process across all its schools. Administrators maintain complete oversight & control, while schools enjoy fast local printing with consistent card design and data accuracy. The combined ScreenCheck and Zebra solution significantly reduced administrative effort, improved card reliability, and created a scalable foundation, ready to support future growth and additional card services throughout the region.
