CardsOnline MyCloud

One online platform, easily design, manage, and issue ID cards and digital IDs.

CardsOnline MyCloud brings card design, data management, printing, and verification together in one secure online environment. This allows you to maintain control over the entire issuance process of ID cards and digital IDs without complex IT installations.

Your organisation can easily import cardholder data via an Excel file or have it automatically updated through a Data Agent. You can then design card layouts in your own branding, manage data centrally, allow users to upload their own photos via the Service Portal, and issue both printed cards and digital IDs whenever and wherever needed. This enables you to work efficiently, clearly, and at scale from a single platform.

Built for growth and flexibility

CardsOnline MyCloud is available in three packages: Base, Professional, and Premium. This allows you to easily choose the option that best fits your needs, with the flexibility to expand later as your requirements grow. Examples include additional users, support for multiple locations, increased record capacity, and additional features such as the Service Portal, Digital ID, and Status Check.

Why CardsOnline MyCloud

- **Cloud-based**
No local server installation required
- **Quick to deploy**
Up and running in a short time
- **Centralised management**
Suitable for multiple locations
- **Secure and reliable**
Hosted in a professional cloud environment

Minimum contract duration 1 month (tacit renewal)

+ Digital ID
Available as a monthly add-on to any MyCloud bundle. Enables issuance of Digital IDs via Wallet Pass or Active ID.

01

1x Data Agent

Automatically import and update cardholder data via SFTP. The MyCloud Data Agent supports CSV and Excel files, ensuring your CardsOnline MyCloud environment stays accurate and current at all times.

02

Data Manager

Manage all cardholder data effortlessly with the MyCloud Data Manager. Import or capture photos, add & update records, search instantly, print cards and issue Digital IDs, everything is streamlined in one intuitive dashboard.

03

Card Designer

Design professional card layouts online using shapes, images, QR codes, dynamic text and logos. Create multiple designs, import BadgeMaker/CardStudio files, and use your own fonts for consistent branding.

Optional Digital ID layouts support both Wallet Pass and Active ID.

04

Card Print Manager

Card Print Manager

The Card Print Manager (CPM) connects CardsOnline with your local printer and encoder, managing all print tasks. Installed on the printer's workstation, it ensures secure and efficient card production.

05

Service Portal

Service Portal

Invite cardholders to securely upload their own photo using a self-service portal. This reduces manual work and speeds up the badge issuance process.

06

Status Check

Status Check lets you instantly verify cardholder's information by scanning a QR code, on a printed card or Digital ID. Simply bind the data fields you want to validate and choose from standard or custom templates to check access rights, memberships, certifications, and more.

07 Optional:

Digital ID

CardsOnline MyCloud lets you issue secure Digital IDs next to printed cards. With just a few clicks, cardholders receive their Digital ID by email and can instantly add it to their mobile device.

Digital IDs are available in two formats: Wallet Pass, compatible with the Wallet Pass app, and Active ID, available in the CardsOnline Active ID app.
